1. Scope

This document describes the features and specifications and installation guide of California PC FLASH CompactFlash™ Cards. In the appendix there is order information with all part numbers and standard options.

2. Introduction

California PC FLASH CompactFlash™ Cards are designed based on CompactFlash™ Card Specification 3.0 with a flash memory controller and NAND-Type flash memory. It can support a capacity of 16MB, 32MB, 64MB, 128MB, 256MB, 512MB, 1GB, 2GB, 4GB, 8GB, and 16GB. The California PC FLASH CompactFlash™ card is available with Commercial [] * temperature grade (0°C ~ +70 °C) and Industrial operating temperature grade (–40 ~ +85°C). It works with various specialized applications in normal or harsh operating environments. CompactFlash™ Card is ideal solution for critical applications • which request for long term supply with consistent key components.

3. System Features

- CompactFlash™ Card Specification 3.0 compliant
- Operating Modes:
 - PC Card Memory Mode.
 - PC Card I/O Mode.
 - True-IDE Mode.
- Ultra DMA Mode supported up to Mode 4
- Hardware RS-code ECC capable of correcting 24 bits in a 1,024 byte data
- Reliable wear-leveling algorithm to ensure the best of flash endurance.
- Very low power consumption
- Very high performance
- Rugged environment is working well
- Automatic error correction and retry capabilities
- Supports power down commands and Auto Stand-by / Sleep Mode
- +5 V $\pm 10\%$ or +3.3 V $\pm 5\%$ operation
- Low weight
- Noiseless
- MTBF > 1,000,000 hours
- Minimum 10,000 insertions
- Support O/S: Windows 31/95/98/Me, Windows NT/2000/XP/2003, WinCE, QNX, Linux, DOS and more
- Capacity: 128MB, 256MB, 512 MB, 1GB, 2GB, 4GB, 8GB, 16GB, 32GB(unformatted)

4. Product Specifications

For all the following specifications, values are defined at ambient temperature and nominal supply voltage unless otherwise stated.

4.1. System Environmental Specifications

Reference Part Number		FCFX ¹ -XXXX ² -X ³ X ⁴ XX
Commercial Temperature	Operating	0°C to +70°C
	Non-operating	-20°C to +80°C
Industrial Temperature	Operating	-40°C to +70°C
	Non-operating	-50° to +95°
Humidity	Operating	5% ~ 95% non-condensing
	Non-operating	
Vibration	Operating	15G peak-to-peak maximum
	Non-operating	
Shock	Operating	2,000 G maximum
	Non-operating	
Altitude	Operating	50,000 fee maximum
	Non-operating	

Part Number Notes:

- 1) X¹: Blank = Commercial Temperature (0°C to 70°C) and I = Industrial Temperature (-40° to +85°)
- 2) XXXX²: Capacities include 16MB, 32MB, 64MB, 128MB, 256MB, 512MB, 01GB, 02GB, 04GB, 08GB, and 16GB
- 3) X³: Transfer mode: 2 = (PIO 4), 3 = DMA 2 (Multi Word), 4 = UDMA 4 (Ultra DMA 4)
- 4) X⁴: Disk mode: 1 = Removable Disk Mode, 2 = Fixed Disk Mode, 3 = Auto Detect Disk Mode

4.3. System Performance

Data Transfer Rate To/From Flash		25 Mbytes /sec burst
Data Transfer Rate To/From Host	Ultra DMA mode 4	66 Mbytes /sec burst
	PIO mode 4	16.6Mbytes /sec burst
SLC Performance	Sequential Read	43 M bytes / sec Max.
	Sequential Write	35 M bytes / sec Max.
MLC Performance	Sequential Read	35 M bytes / sec Max.
	Sequential Write	15.5 M bytes / sec Max.

4.4. System Reliability

MTBF	> 1,000,000 hours
Data Reliability	< 1 non-recoverable error in 10^{14} bits read < 1 erroneous correction in 10^{20} bits read
Wear-leveling Algorithms	Supportive
ECC Technology	Hardware RS-code ECC capable of correcting 24 bits in a 1,024 byte data
Endurance (SLC)	Greater than 1,000,000 cycles Logically contributed by Wear-leveling and advanced bad sector management
Endurance (MLC)	Greater than 100,000 cycles Logically contributed by Wear-leveling and advanced bad sector management
Data Retention	10 years

4.5. Physical Specifications

4.5.1. Physical Specifications

Length	36.40 ± 0.15 mm ($1.433 \pm .006$ in)
Width	42.80 ± 0.10 mm ($1.685 \pm .004$ in)
Thickness	$3.3 \text{ mm} \pm 0.10 \text{ mm}$ ($.130 \pm .004$ in) (Excluding Lip)
Weight	11.4 g (.40 oz) typical, 14.2 g (.50 oz) maximum

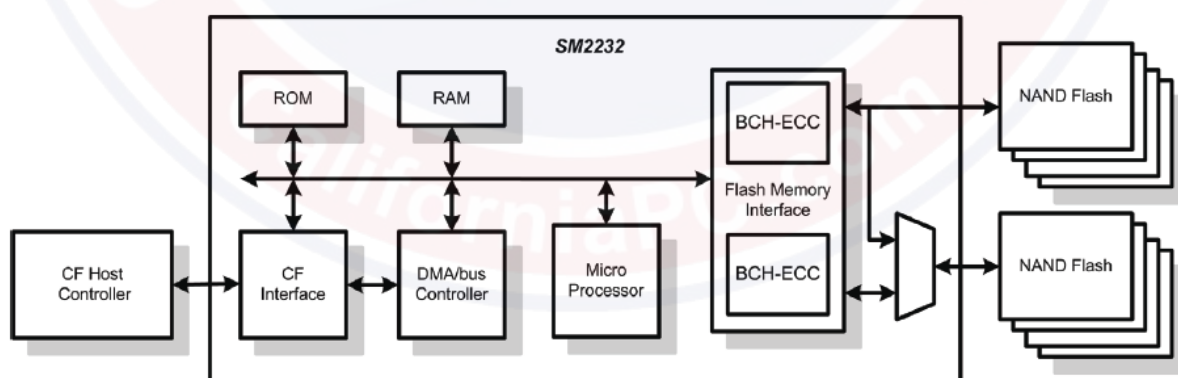

4.5.2. Dimension

4.6. Capacity Specification

The specific capacities for the various models and the default number of heads, sectors and cylinders.

Capacity	Default Cylinder	Default Head	Default Sector	User Data Size
128MB	253	16	63	Depended on file management
256MB	500	16	63	
512MB	991	16	63	
1GB	1,966	16	63	
2GB	3,900	16	63	
4GB	7,785	16	63	
8GB	15,538	16	63	
16GB	31,045	16	63	
32GB	62,041	16	63	

4.7. Card Block Diagram

5. Interface Description

5.1. Pin Assignments

	Memory card mode		I/O card mode		True IDE mode	
Pin NO.	Signal name	I/O	Signal name	I/O	Signal name	I/O
1	GND	—	GND	—	GND	—
2	D3	I/O	D3	I/O	D3	I/O
3	D4	I/O	D4	I/O	D4	I/O
4	D5	I/O	D5	I/O	D5	I/O
5	D6	I/O	D6	I/O	D6	I/O

49	D10 ¹	I/O	D10 ¹	I/O	D10 ¹	I/O
50	GND	—	GND	—	GND	—

Note:

- 1) These signals are required only for 16 bit accesses and not required when installed in 8 bit systems. Devices should allow for 3-state signals not to consume current.
- 2) The signal should be grounded by the host.
- 3) The signal should be tied to VCC by the host.
- 4) The mode is optional for CF+ Cards, but required for CompactFlash™ Storage Cards.

- 5) The -CSEL signal is ignored by the card in PC Card modes. However, because it is not pulled up on the card in these modes, it should not be left floating by the host in PC Card modes. In these modes, the pin should be connected by the host to PC Card A25 or grounded by the host.
- 6) If DMA operations are not used, the signal should be held high or tied to VCC by the host. For proper operation in older hosts: while DMA operations are not active, the card shall ignore this signal, including a floating condition
- 7) Signal usage in True IDE Mode except when Ultra DMA mode protocol is active.
- 8) Signal usage in True IDE Mode when Ultra DMA mode protocol DMA Write is active.
- 9) Signal usage in True IDE Mode when Ultra DMA mode protocol DMA Read is active.

5.2. Pin Descriptions

Signal Name	Dir	Pin No.	Description
A10 to A0 (PC Card Memory Mode)	I	8,10,11,12,14,15, 16,17,18,19,20	These address lines along with the-REG signal are used to select the following: The I/O port address registers within the CompactFlash™ Storage Card or CF + Card, the memory mapped port add address registers within the CompactFlash™ Storage Card or CF+ Card , a byte in the card's information structure and its configuration control and status registers.
A10 to A0 (PC Card I/O Mode)			
A2 to A0 (True IDE Mode)		18,19,20	In True IDE Mode only {2:0} are used to select the one of eight registers in the Task File. The remaining address lines should be grounded by the host.
BVD1 (PC Card Memory mode)	I/O	46	This signal is asserted high as BVD1 is not supported.
-STSCHG (PC Card Memory Mode)			This Signal is asserted low to alert the host to changes in the RDY/-BSY and Write Protect states; while the I/O interface is configured. Its use is controlled by the Card Configured and Status Register.
-PDIAG (True IDE Mode)			In the True IDE Mode, this input/output is the Pass Diagnostic signal in the Master/Slave handshake protocol.

Signal Name	Dir	Pin No.	Description
BVD2 (PC Card Memory Mode)	I/O	45	This signal is asserted high, as BVD2 is not supported.
-SPKR (PC Card I/O Mode)			This line is Binary AUDIO OUTPUT From the Card. If the Card doesn't support the Binary Audio function, this line should be held negated.
-DASP (True IDE Mode)			In the True IDE Mode, this input/output is the Disk Active/Slave Present signal in the Master/Slave.
-CD1, -CD2 (PC Card Memory Mode)	O	25,26	These Card Detect pins are connected to ground on the CompactFlash™ Storage Card or CF+ Card. They are used by the host to determined that the CompactFlash™ Storage Card or CF+ Card is fully inserted into its socket.
-CE1,-CE2 (PC Card Memory Mode)	I	7,32	There input signals are used both to select the card and to indicate to the card whether a byte or a word operation is being performed. -CE2 always accesses the odd byte of the word depending on A0 and -CE2.
-CE1,-CE2 (PC Card I/O Mode)			A multiplexing scheme based on A1. -DE1, -CE2 allow 8-bit hosts to access all data on D0 to D7. See Access Specification below.
-CS0,-CS1 (True IDE Mode)			In the True IDE Mode CS0 is the chip select for the task file registers while CS1 is used to select the Alternate Status Register and Device Control Register.
-CSEL (PC Card Memory Mode)	I	39	This signal is not used for this mode.
-CSEL (PC Card I/O Mode)			This internally pulled up signal is used to configure this device as a Master or a Slave when configured in the True IDE Mode. When this pin is grounded, this device is configured as a Master. When the pin is open, this device is configured as a Slave.
-CSEL (True IDE Mode)			
D15 to D00 (PC Card Memory Mode)	I/O	31,30,29,38,37,49 ,48,48,6,5,4,3,2,2 3,22,21	These lines carry the Data, commands and Status information between the host and the controller. D00 is the LSB of the Even Byte of the Word D08 is the LSB of the Odd Byte of the Word.
D15 to D00 (PC Card I/O Mode)			

Signal Name	Dir	Pin No.	Description
D15 to D00 (True IDE Mode)	I/O	31,30,29,38,37,49 ,48,48,6,5,4,3,2,2 3,22,21	True IDE Mode, all Task File operations occur in byte mode on the low order bus D00 to D07 while all data transfers are 16 but using D00 to D15.
GND (PC Card Memory Mode)			Ground
GND (PC Card I/O Mode)			
GND (True IDE Mode)			
-INPCAK (PC Card Memory Mode)	O	43	This signal is not used in this Mode.
-INPACK (PC Card I/O Mode)			The Input Acknowledge signal is asserted by the CompactFlash™ Storage Card or CF+ Card when the card is selected and responding to an I/O read cycle at the address that is on the address bus. This signal is used by the host to control the enable of any input data buffers between the CompactFlash™ Storage Card or CF+ Card and the CPU.
-INPACK (True IDE Mode)			In True IDE Mode this output signal is not used and should not be connected at the host.
-IORD (PC Card Memory Mode)	I	34	This signal is not used in this mode.
-IORD (PC Card I/O Mode)			This is an I/O Read strobe generated by the host. This signal gates I/O data onto the bus from the CompactFlash™ Storage Card or CF+ Card when the card is configured to use the I/O interface.
-IORD (True IDE Mode)			In True IDE Mode, this signal has same function as in PC Card I/O Mode.

Signal Name	Dir	Pin No.	Description
-IOWR (PC Card Memory Mode)	I	35	This signal is not used in this mode.
-IOWR (PC Card I/O Mode)			The I/O Write strobe pulse is used to clock I/O data on the Card Data bus into the CompactFlash™ Storage Card or CF+ Card controller registers when the Compact Storage Card or CF+ Card is configured to use the I/O interface. The clocking will occur on the negative to positive edge of the signal (Trailing edge).
-IOWR (True IDE Mode)			In True IDE Mode, this signal has the same function as in PC Card I/O Mode.
-OE (PC Card Memory Mode)	I	9	This is an Output Enable strobe generated by the host interface. It is used to read data from the CompactFlash™ Storage Card or CF+ Card in Memory Mode and to read the CIS and configuration registers.
-OE (PC Card I/O Mode)			In PC Card I/O Mode. This signal is used to read the CIS and configuration registers.
-ATA SEL (True IDE Mode)			To enable True IDE Mode this input should be grounded by the host.
PDY/BSY (PC Card Memory Mode)	O	37	In Memory Mode this signal is set high when the CompactFlash™ Storage Card or CF+ Card is ready to accept a new data transfer operation and held low when the card is busy. The Host memory card socket must provide a pull-up resistor. At power up and at Reset the RDY/-BSY signal is held low (busy) until the CompactFlash™ Storage Card or CF+ Card has completed its power up or reset function. No access of any type should be made to the CompactFlash™ Storage Card or CF+ Card during this time. The RDY/-BSY signal is held high (disabled from being busy) whenever the following condition is true. The CompactFlash™ Storage Card or CF+ Card has been powered up with + RESET continuously disconnected or asserted.

Signal Name	Dir	Pin No.	Description
-IREQ (PC Card I/O Mode)			Operation – After the CompactFlash™ Storage Card or CF+ Card has been configured for I/O operational this signal is used as interrupt Request. This line is strobe low to generate a pulse mode interrupt or held low for a level mode interrupt.
INTRO (True IDE Mode)			In True IDE Mode signal is the active high interrupt Request to the host.
-REG (PC Card Memory Mode)	I	44	This signal is used during Memory Cycles to distinguish between Common Memory and Register (Attribute) Memory accesses. High for Common Memory. Low for Attribute Memory.
-REG (PC Card I/O Mode)			The signal must also be active (low) during I/O Cycles when the I/O address is on the Bus.
-REG (True IDE Mode)			In the True IDE Mode this input pin is the active low hardware reset from the host.
RESET (PC Card Memory Mode)	I	41	When the pin is high, this signal Resets the CompactFlash™ Storage Card or CF+ Card. The CompactFlash™ Card or CF+ Card is Reset only at power up if this pin is left high or open from power-up. The CompactFlash™ Storage CF Card or CF+ Card is also Reset when the Soft Reset bit in the Card Configuration Option Register is set.
RESET (PC Card I/O Mode)			
RESET (True IDE Mode)			In the True IDE Mode this input pin is the active low hardware reset from the host.
VCC (PC Card Memory Mode) (PC Card I/O Mode) (True IDE Mode)	-	13,38	+5V, +3.3V power
-VS1/-VS2 (PC Card Memory Mode) (PC Card I/O Mode) (True IDE Mode)	O	3,40	Voltage Sense Signals. – VS1 is grounded so that the CompactFlash™ Storage Card or CF+ Card CIS can be read at 3.3 volts and –VS2 is reserved by PCMCIA for a secondary voltage.

Signal Name	Dir	Pin No.	Description
-WAIT (PC Card Memory Mode)	O	42	The –Wait signal is driven low by the CompactFlash™ Storage Card or CF+ Card to signal the host to delay completion of a memory or I/O cycles that is in progress.
IORDY (True IDE Mode)			In True IDE Mode this output signal may be used as IORDY.
-WE (PC Card Memory Mode)	I	36	This is a signal driven by the host and used for starting memory write data to the registers of the CompactFlash™ Storage Card or CF+ Card when the card is configured in the memory interface mode. It is also used for writing the configuration registers.
-WE (PC Card I/O Mode)			In PC Card I/O Mode, this signal is used for writing the configuration registers.
-WE (True IDE Mode)			In True IDE Mode this input signal is not used and should be connected to VCC by the Host.
WP (PC Card Memory Mode)	O	24	Memory Mode-The CompactFlash™ Storage Card or CF+ Card does not have a write protect switch. This signal is held low after the completion of the reset initialization sequence.
-IOIS16 (PC Card I/O Mode)			I/O Operation-When the CompactFlash™ Storage Card or CF+ Card is configured for I/O operation Pin 24 is used for the – I/O Selected is 16 Bit Port (-IOIS1) function. A Low signal indicates that a 16 bit or odd byte only operation can be performed at the addressed port.
-IOIS16 (True IDE Mode)			In True IDE Mode this output signal is asserted low when this device is expecting a word data transfer cycle.

6. Electrical Specification

The following table defines all D.C. Characteristics for the CompactFlash™ $\hat{A} \cdot \hat{A} \cdot \hat{A}$
The conditions are:

Commercial Temperature Products
$V_{CC} = 5V \pm 10\%$ $V_{CC} = 3.3V \pm 5\%$ $T_a = 0^{\circ}C \text{ to } 70^{\circ}C$

6.1. Power Pin Description

Pin Name	I/O	Description
V_{CCK}	Power	Host V_{CC}
$V_{CC} 3.3V$	Power	3.3V V_{CC}
GND	Power	GND

6.2. Absolute Maximum Rating

6.2.1. CompactFlash interface I/O at 5.0V

Symbol	Parameter	Min.	Max.	Units
V_{CC}	Power Supply	4.5	5.5	V
V_{OH}	Output Voltage High Level	$V_{CC}-0.8$		V
V_{OL}	Output Voltage Low Level		0.8	V
V_{IH}	Input Voltage High Level	2.92		V
V_{IL}	Input Voltage Low Level		1.7	V
T_{OPR-W}	Operating temperature for wide grade	-40	+85	$^{\circ}C$
T_{OPR-S}	Operating temperature for standard grade	0	+70	$^{\circ}C$
T_{STG}	Storage temperature	-40	125	$^{\circ}C$

6.2.2. CompactFlash interface I/O at 3.3V

Symbol	Parameter	Min.	Max.	Units
V_{CC}	Power Supply	2.97	3.63	V
V_{OH}	Output Voltage High Level	$V_{CC}-0.8$		V
V_{OL}	Output Voltage Low Level		0.8	V
V_{IH}	Input Voltage High Level	2.05		V
V_{IL}	Input Voltage Low Level		1.25	V
T_{OPR-W}	Operating Temperature For Wide Grade	-40	+85	°C
T_{OPR-S}	Operating Temperature For Standard Grade	0	+70	°C
T_{STG}	Storage Temperature	-40	125	°C

6.2.3. The I/O pins other than CompactFlash interface

Symbol	Parameter	Min.	Max.	Unit	Remark
V_{CC}	Supply Voltage	2.7	3.6	V	
V_{OH}	High level output voltage	2.4		V	
V_{OL}	Low level output voltage		0.4	V	
V_{IH}	High level input voltage	2.0		V	Non-Schmitt trigger
		1.4	2.0	V	Schmitt trigger3
V_{IL}	Low level input voltage		0.8	V	Non-Schmitt trigger
		0.8	1.2	V	Schmitt trigger3

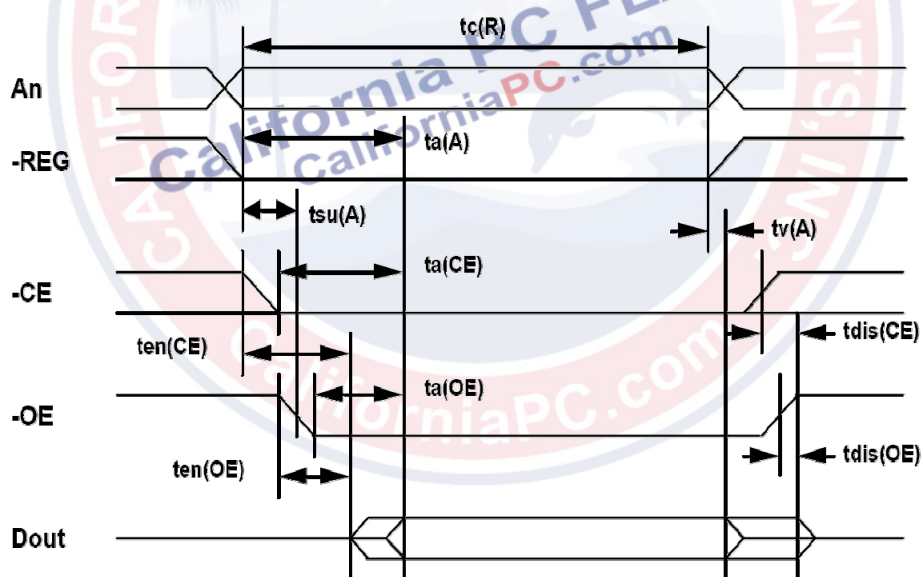

6.3. Recommended Operating Conditions

Symbol	Parameter	Min	Typ	Max	Unit
V_{CC}	Power Supply Voltage	3.0	3.3	3.6	V
V_{IN}	Input Voltage	-0.3	-	$V_{CC} + 0.3$	V
V_{CCQ}	Power Supply for Host I/O	3.0	-	5.5	V
V_{IN_Host}	Input Voltage for Host I/O	-0.3	-	$V_{CCQ} + 0.3$	V

6.4. AC Characteristics

6.4.1. Attribute Memory Read Timing

Speed Version			300 ns	
Symbol	Item	IEEE Symbol	Min	Max
$t_{c(R)}$	Read Cycle Time	t_{AVAV}	300	
$t_{a(A)}$	Address Access Time	t_{AVQV}		300
$t_{a(CE)}$	Card Enable Access Time	t_{ELQV}		300
$t_{a(OE)}$	Output Enable Access Time	t_{GLQV}		150
$t_{dis(CE)}$	Output Disable Time from CE	t_{EHQZ}		100
$t_{dis(OE)}$	Output Disable Time from OE	t_{GHQZ}		100
$t_{su(A)}$	Address Setup Time	t_{AVGL}	30	
$t_{en(CE)}$	Output Enable Time from CE	t_{ELQNZ}	5	
$t_{en(OE)}$	Output Enable Time from OE	t_{GLQNZ}	5

tv(WT)	Data Setup for Wait Release	tQVWTH		0		0		0		na ¹
tw(WT)	Wait Width Time ²	tWTLWTH		350		350		350		na ¹

Note:

- 1) -WAIT is not supported in this mode.
- 2) The maximum load on -WAIT is 1 LSTTL with 50 pF (40pF below 120nsec Cycle Time) total load. All times are in nanoseconds. Dout signifies data provided by the CompactFlash Storage Card or CF+Card to the system. The -WAIT signal may be ignored if the -OE cycle to cycle time is greater than the Wait Width time. The Max Wait Width time can be determined from the Card Information Structure. The Wait Width time meets the PCMCIA specification of 12μs but is intentionally less in this specification.

t_2	HIOE/HIOW (min) Register (8 bit) ¹	290	290	290	80	70	65	55
t_{2i}	HIOE/HIOW recovery time (min) ¹	-	-	-	70	25	25	20
t_3	HIOW data setup (min)	60	45	30	30	20	20	15
t_4	HIOW data hold (min)	30	20	15	10	10	5	5
t_5	HIOE data setup (min)	50	35	20	20	20	15	10
t_6	HIOE data hold (min)	5	5	5	5	5	5	5
t_{6Z}	HIOE data tristate (max) ²	30	30	30	30	30	20	20
t_7	Address valid to IOCS16 assertion (max) ⁴	90	50	40	n/a	n/a	n/a	n/a
t_8	Address valid to IOCS16 released (max) ⁴	60	45	30	n/a	n/a	n/a	n/a
t_9	HIOE/HIOW to address valid hold	20	15	10	10	10	10	10
t_{RD}	Read Data Valid to IORDY active (min), if IORDY initially low after t_A	0	0	0	0	0	0	0
t_A	IORDY Setup time ³	35	35	35	35	35	na ⁵	na ⁵
t_B	IORDY Pulse Width (max)	1250	1250	1250	1250	1250	na ⁵	na ⁵
t_C	IORDY assertion to release (max)	5	5	5	5	5	na ⁵	na ⁵

Note:

All timings are in nanoseconds. The maximum load on -IOCS16 is 1 LSTTL with a 50 pF (40pF below 120nsec Cycle Time) total load. All times are in nanoseconds. Minimum time from -IORDY high to -IORD high is 0 nsec, but minimum -IORD width shall still be met.

- 1) t_0 is the minimum total cycle time, t_2 is the minimum command active time, and t_{2i} is the minimum command recovery time or command inactive time. The actual cycle time equals the sum of the actual command active time and the actual command inactive time. The three timing requirements of t_0 , t_2 , and t_{2i} shall be met. The minimum total cycle time requirement is greater than the sum of t_2 and t_{2i} . This means a host implementation can lengthen either or both t_2 or t_{2i} to ensure that t_0 is equal to or greater than the value reported in the device's identify device data. A CompactFlash Storage Card implementation shall support any legal host implementation.

- 2) *This parameter specifies the time from the negation edge of -IORD to the time that the data bus is no longer driven by the CompactFlash Storage Card (tri-state).*
- 3) *The delay from the activation of -IORD or -IOWR until the state of IORDY is first sampled. If IORDY is inactive then the host shall wait until IORDY is active before the PIO cycle can be completed. If the CompactFlash Storage Card is not driving IORDY negated at t_A after the activation of -IORD or -IOWR, then t_5 shall be met and t_{RD} is not applicable. If the CompactFlash Storage Card is driving IORDY negated at the time t_A after the activation of -IORD or -IOWR, then t_{RD} shall be met and t_5 is not applicable.*
- 4) *t_7 and t_8 apply only to modes 0, 1 and 2. For other modes, this signal is not valid.*
- 5) *IORDY is not supported in this mode.*

I

True IDE PIO Mode Timing Diagram

Notes:

- (1) Device address consists of CE0, CE1, and HA[2:0]
- (2) Data consists of HD[15:00] (16-bit) or HD[7:0] (8 bit)
- (3) IOCS16 is shown for PIO modes 0, 1 and 2. For other modes, this signal is ignored.
- (4) The negation of IORDY by the device is used to extend the PIO cycle. The determination of whether the cycle is to be extended is made by the host after t_A from the assertion of HIOE or HIOW. The assertion and negation of IORDY is described in the following three cases:
 - (4-1) Device never negates IORDY: No wait is generated.
 - (4-2) Device drives IORDY low before t_A : wait generated. The cycle completes after IORDY is reasserted. For cycles where a wait is generated and HIOE is asserted, the device shall place read data on D15-D00 for t_{RD} before causing IORDY to be asserted.

6.4.8. True IDE Multiword DMA Mode Read/Write Timing

	Item	Mode 0	Mode 1	Mode 2	Mode 3	Mode 4	Note
t_O	Cycle time (min)	480	150	120	100	80	1
t_D	HIOE / HIOW asserted width (min)	215	80	70	65	55	1
t_E	HIOE data access (max)	150	60	50	50	45	
t_F	HIOE data hold (min)	5	5	5	5	5	
t_G	HIOE/HIOW data setup (min)	100	30	20	15	10	
t_H	HIOW data hold (min)	20	15	10	5	5	
t_I	DMACK(HREG) to HIOE/HIOW setup (min)	0	0	0	0	0	
t_J	HIOE / HIOW to -DMACK hold (min)	20	5	5	5	5	
t_{KR}	HIOE negated width (min)	50	50	25	25	20	1
t_{KW}	HIOW negated width (min)	215	50	25	25	20	1
t_{LR}	HIOE to DMARQ delay (max)	120	40	35	35	35	
t_{LW}	HIOW to DMARQ delay (max)	40	40	35	35	35	
t_M	CEX valid to HIOE / HIOW	50	30	25	10	5	
t_N	CEX hold	15	10	10	10	10	

Notes:

t_O is the minimum total cycle time and t_D is the minimum command active time, while t_{KR} and t_{KW} are the minimum command recovery time or command inactive time for input and output cycles respectively. The actual cycle time equals the sum of the actual command active time and the actual command inactive time. The three timing requirements of t_O , t_D , t_{KR} , and t_{KW} shall be met. The minimum total cycle time requirement is greater than the sum of t_D and t_{KR} or t_{KW} for input and output cycles respectively. This means a host implementation can lengthen either or both of t_D and either of t_{KR} , and t_{KW} as needed to ensure that t_O is equal to or greater than the value reported in the device's identify device data. A CompactFlash Storage Card implementation shall support any legal host implementation.

True IDE Multiword DMA Mode Read/Write Timing Diagram

Notes:

- 1) *If the Card cannot sustain continuous, minimum cycle time DMA transfers, it may negate DMARQ within the time specified from the start of a DMA transfer cycle to suspend the DMA transfers in progress and reassert the signal at a later time to continue the DMA operation.*
- 2) *This signal may be negated by the host to suspend the DMA transfer in progress.*

6.4.9. Ultra DMA Signal Usage In Each Interface Mode

Signal	Type	(Non UDMA MEM MODE)	PC CARD MEM MODE UDMA	PC CARD IO MODE UDMA	TRUE IDE MODE UDMA

All Timings in ns

- 1) *All timing measurement switching points (low to high and high to low) shall be taken at 1.5 V.*
- 2) *All signal transitions for a timing parameter shall be measured at the connector specified in the measurement location column. For example, in the case of tRFS, both STROBE and –DMARDY transitions are measured at the sender connector.*
- 3) *The parameter tCYC shall be measured at the recipient's connector farthest from the sender.*
- 4) *The parameter tLI shall be measured at the connector of the sender or recipient that is responding to an incoming transition from the recipient or sender respectively. Both the incoming signal and the outgoing response shall be measured at the same connector.*
- 5) *The parameter tAZ shall be measured at the connector of the sender or recipient that is driving the bus but must release the bus to allow for a bus turnaround.*
- 6) *See the AC Timing requirements in Table 28: Ultra DMA AC Signal Requirements.*

6.4.11. Ultra DMA Data Burst Timing Descriptions

Name	Comment	Notes
$t_{2CYCTYP}$	Typical sustained average two cycle time	
t_{CYC}	Cycle time allowing for asymmetry and clock variations (from STROBE edge to STROBE edge)	
t_{2CYC}	Two cycle time allowing for clock variations (from rising edge to next rising edge or from falling edge next falling edge of STROBE)	
t_{DS}	Data setup time at recipient (from data valid until STROBE edge)	2
t_{DH}	Data hold time at recipient (from STROBE edge until data may become invalid)	2
t_{DVS}	Data valid setup time at sender (from data valid until STROBE edge)	3
t_{DVH}	Data valid hold time at sender (from STROBE edge until data may become invalid)	3
t_{CS}	CRC word setup time at device	2
t_{CH}	CRC word hold time device	2
t_{CVS}	CRC word valid setup time at host (from CRC valid until -DMACK negation)	3
t_{CVH}	CRC word valid hold time at sender (from -DMACK negation until CRC may become invalid)	3
t_{ZFS}	Time from STROBE output released-to-driving until the first transition of critical timing.	
t_{DZFS}	Time from data output released-to-driving until the first transition of critical timing.	
t_{FS}	First STROBE time (for device to first negate DSTROBE from STOP during a data in burst)	
t_{LI}	Limited interlock time	1
t_{MLI}	Interlock time with minimum	1
t_{UI}	Unlimited interlock time	1
t_{AZ}	Maximum time allowed for output drivers to release (from asserted or negated)	
t_{ZAH}	Minimum delay time required for output	
t_{ZAD}	drivers to assert or negate (from released)	
t_{ENV}	Envelope time (from -DMACK to STOP and -HDMARDY during data in burst initiation and from DMACK to STOP during data out burst initiation)	
t_{RFS}	Ready-to-final-STROBE time (no STROBE edges shall be sent this long after negation of -DMARDY)	
t_{RP}	Ready-to-pause time (that recipient shall wait to pause after negating -DMARDY)	
t_{IORDYZ}	Maximum time before releasing IORDY	
t_{ZIORDY}	Minimum time before driving IORDY	4

Name	Comment	Notes
t_{ACK}	Setup and hold times for -DMACK (before assertion or negation)	
t_{SS}	Time from STROBE edge to negation of DMARQ or assertion of STOP (when sender terminates a burst)	

Notes:

- (1) The parameters t_{UI} , t_{MLI} (in 6.4.17: Ultra DMA Data-In Burst Device Termination Timing and 6.4.18: Ultra DMA Data-In Burst Host Termination Timing), and t_{LI} indicate sender-to-recipient or recipient-to-sender interlocks, i.e., one agent (either sender or recipient) is waiting for the other agent to respond with a signal before proceeding. t_{UI} is an unlimited interlock that has no maximum time value. t_{MLI} is a limited time-out that has a defined minimum. t_{LI} is a limited time-out that has a defined maximum.
- (2) 80-conductor cabling (see ATA specification :Annex A) shall be required in order to meet setup (t_{DS} , t_{CS}) and hold (t_{DH} , t_{CH}) times in modes greater than 2.
- (3) Timing for t_{DVS} , t_{DVH} , t_{CVS} and t_{CVH} shall be met for lumped capacitive loads of 15 and 40 pF at the connector where the Data and STROBE signals have the same capacitive load value. Due to reflections on the cable, these timing measurements are not valid in a normally functioning system.
- 1) For all timing modes the parameter t_{ZIORDY} may be greater than t_{ENV} due to the fact that the host has a pull-up on IORDY- giving it a known state when released.

6.4.12. Ultra DMA Sender and Recipient IC Timing Requirements

Name	UDMA Mode 0		UDMA Mode 1		UDMA Mode 2		UDMA Mode 3		UDMA Mode 4		UDMA Mode 5		UDMA Mode 6	
	Min	Max	Min	Max	Min	Max	Min	Max	Min	Max	Min	Max	Min	Max
t_{DSIC}	14.7		9.7		6.8		2.3		4.8		2.3		2.3	
t_{DHIC}	4.8		4.8		4.8		2.8		4.8		2.8		2.8	
t_{DVSIC}	72.9		50.9		33.9		6.0		9.5		6.0		5.2	
t_{DVHIC}	9.0		9.0		9.0		6.0		9.0		6.0		5.2	
t_{DSIC}	Recipient IC data setup time (from data valid until STROBE edge) (see note 2)													
t_{DHIC}	Recipient IC data hold time (from STROBE edge until data may become invalid) (see note 2)													
t_{DVSIC}	Sender IC data valid setup time (from data valid until STROBE edge) (see note 3)													
t_{DVHIC}	Sender IC data valid hold time (from STROBE edge until data may become invalid) (see note 3)													

Notes:

- 1) All timing measurement switching points (low to high and high to low) shall be taken at 1.5 V.
- 2) The correct data value shall be captured by the recipient given input data with a slew rate of 0.4 V/ns rising and falling and the input STROBE with a slew rate of 0.4 V/ns rising and falling at t_{DSIC} and t_{DHIC} timing (as measured through 1.5 V).
- 3) The parameters t_{DVSIC} and t_{DVHIC} shall be met for lumped capacitive loads of 15 and 40 pF at the IC where all signals have the same capacitive load value. Noise that may couple onto the output signals from external sources has not been included in these values.

6.4.13. Ultra DMA AC Signal Requirements

Name	Comment	Min [V/ns]	Max [V/ns]	Notes
SRISE	Rising Edge Slew Rate for any signal		1.25	1
SFALL	Falling Edge Slew Rate for any signal		1.25	1

Notes:

- 1) *The sender shall be tested while driving an 18 inch long, 80 conductor cable with PVC insulation material. The signal under test shall be cut at a test point so that it has not trace, cable or recipient loading after the test point. All other signals should remain connected through to the recipient. The test point may be located at any point between the sender's series termination resistor and one half inch or less of conductor exiting the connector. If the test point is on a cable conductor rather than the PCB, an adjacent ground conductor shall also be cut within one half inch of the connector.*

The test load and test points should then be soldered directly to the exposed source side connectors. The test loads consist of a 15 pF or a 40 pF, 5%, 0.08 inch by 0.05 inch surface mount or smaller size capacitor from the test point to ground. Slew rates shall be met for both capacitor values.

Measurements shall be taken at the test point using a <1 pF, >100 Kohm, 1 Ghz or faster probe and a 500 MHz or faster oscilloscope. The average rate shall be measured from 20% to 80% of the settled VOH level with data transitions at least 120 nsec apart. The settled VOH level shall be measured as the average output high level under the defined testing conditions from 100 nsec after 80% of a rising edge until 20% of the subsequent falling edge.

6.4.14. Ultra DMA Data-In Burst Initiation Timing

Ultra DMA Data-In Burst Initiation Timing Diagram

ALL WAVEFORMS IN THIS DIAGRAM ARE SHOWN WITH THE ASSERTED STATE HIGH. NEGATIVE TRUE SIGNALS APPEAR INVERTED ON THE BUS RELATIVE TO THE DIAGRAM.

Notes:

The definitions for the IORDY:-DDMARDY:DSTROBE, -IORD:-HDMARDY:HSTROBE, and -IOWR:STOP signal lines are not in effect until DMARQ and -DMACK are asserted. HA[02:00], -CS0 & -CS1 are True IDE mode signal definitions. HA[10:00], -CE1 and -CE2 are PC Card mode signals. The Bus polarity of (-) DMACK and (-) DMARQ are dependent on interface mode active.

6.4.15. Sustained Ultra DMA Data-In Burst Timing

Sustained Ultra DMA Data-In Burst Timing Diagram

Notes:

HD[15:00] and DSTROBE signals are shown at both the host and the device to emphasize that cable settling time as well as cable propagation delay shall not allow the data signals to be considered stable at the host until some time after they are driven by the device.

6.4.16. Ultra DMA Data-In Burst Host Pause Timing

Ultra DMA Data-In Burst Host Pause Timing Diagram

All waveforms in this diagram are shown with the asserted state high. Negative true signals appear inverted on the bus relative to the diagram.

Notes:

- 1) The host may assert **STOP** to request termination of the Ultra DMA data burst no sooner than t_{RP} after **-HDMARDY** is negated.
- 2) After negating **-HDMARDY**, the host may receive zero, one, two, or three more data words from the device.
- 3) The bus polarity of the (-) **DMARQ** and (-) **DMACK** signals is dependent on the active interface mode.

6.4.17. Ultra DMA Data-In Burst Device Termination Timing

Ultra DMA Data-In Burst Device Termination Timing Diagram

All waveforms in this diagram are shown with the asserted state high. Negative true signals appear inverted on the bus relative to the diagram.

Notes:

The definitions for the STOP, HDMARDY, and DSTROBE signal lines are no longer in effect after DMARQ and DMACK are negated. HA[02:00], -CS0 & -CS1 are True IDE mode signal definitions. HA[10:00], -CE1 and -CE2 are PC Card mode signals. The bus polarity of DMARQ and DMACK are dependent on the active interface mode.

6.4.18. Ultra DMA Data-In Burst Host Termination Timing

Ultra DMA Data-In Burst Host Termination Timing Diagram

All waveforms in this diagram are shown with the asserted state high. Negative true signals appear inverted on the bus relative to the diagram.

Notes:

The definitions for the STOP, HDMARDY, and DSTROBE signal lines are no longer in effect after DMARQ and DMACK are negated. HA[02:00], -CS0 & -CS1 are True IDE mode signal definitions. HA[10:00], -CE1 and -CE2 are PC Card mode signal definitions. The bus polarity of DMARQ and DMACK depend on the active interface mode.

6.4.19. Ultra DMA Data-Out Burst Initiation Timing

Ultra DMA Data-Out Burst Initiation Timing Diagram

All waveforms in this diagram are shown with the asserted state high. Negative true signals appear inverted on the bus relative to the diagram.

Note:

The definitions for the STOP, DDMARDY, and HSTROBE signal lines are not in effect until DMARQ and DMACK are asserted. HA[02:00], -CS0 & -CS1 are True IDE mode signal definitions. HA[10:00], -CE1 and -CE2 are PC Card mode signal definitions. The bus polarity of DMARQ and DMACK depend on the active interface mode.

6.4.20. Sustained Ultra DMA Data-Out Burst Timing

Sustained Ultra DMA Data-Out Burst Timing Diagram

Note:

Data (HD[15:00]) and HSTROBE signals are shown at both the device and the host to emphasize that cable settling time as well as cable propagation delay shall not allow the data signals to be considered stable at the device until some time after they are driven by the host.

6.4.21. Ultra DMA Data-Out Burst Device Pause Timing

A large, semi-transparent watermark logo for California PC FLASH is centered on the page. It features a circular border with the text 'CALIFORNIA PERIPHERALS & COMPONENTS, INC.' and 'CaliforniaPC.com'. Inside the circle is a stylized landscape with mountains, a sunburst, and palm trees. The text 'California PC FLASH' is prominently displayed across the center of the logo.

Ultra DMA Data-Out Burst Device Pause Timing Diagram

All waveforms in this diagram are shown with the asserted state high. Negative true signals appear inverted on the bus relative to the diagram.

Notes:

- 1) *The device may negate DMARQ to request termination of the Ultra DMA data burst no sooner than tRP after -DDMARDY is negated.*
- 2) *After negating -DDMARDY, the device may receive zero, one, two, or three more data words from the host.*
- 3) *The bus polarity of DMARQ and DMACK depend on the active interface mode.*

6.4.22. Ultra DMA Data-Out Burst Device Termination Timing

Ultra DMA Data-Out Burst Device Termination Timing Diagram

All waveforms in this diagram are shown with the asserted state high. Negative true signals appear inverted on the bus relative to the diagram.

Note:

The definitions for the STOP, DDMARDY, and HSTROBE signal lines are no longer in effect after DMARQ and DMACK are negated. HA[02:00], -CS0 & -CS1 are True IDE mode signal definitions. HA[00:10], -CE1 and -CE2 are PC Card mode signals. The bus polarity of DMARQ and DMACK depend on the active interface mode.

6.4.23. Ultra DMA Data-Out Burst Host Termination Timing

Ultra DMA Data-Out Burst Host Termination Timing Diagram

All waveforms in this diagram are shown with the asserted state high. Negative true signals appear inverted on the bus relative to the diagram.

Notes:

The definitions for the STOP, DDMARDY, and HSTROBE signal lines are no longer in effect after DMARQ and DMACK are negated. HA[02:00], -CS0 & -CS1 are True IDE mode signal definitions. HA[10:00], -CE1 and -CE2 are PC Card mode signal definitions. The bus polarity of DMARQ and DMACK depend on the active interface mode.

7. CF – ATA Command Description

This section defines the software requirements and the format of the commands the host sends to the CompactFlash™ Storage Cards. Commands are issued to the CompactFlash™ Storage Card by loading the required registers in the command block with the supplied parameters, and then writing the command code to the Command Register. The manner in which a command is accepted varies. There are three classes (see Table 37: CF-ATA Command Set) of command acceptance, all dependent on the host not issuing commands unless the CompactFlash™ Storage Card is not busy (BSY=0). All commands listed in this specification shall be implemented. Commands can be implemented as “no operation” to meet this requirement. The Security Mode feature set (command codes F1, F2, F3, F4, F5, and F6) should not be implemented unless the device is intended to be used in an embedded, non-removable application. The Security Mode feature set was not designed for removable devices and certain problems may be encountered when using these commands in a removable application. This specification introduces some new commands and features. If these commands are used on an older CF card, an Invalid Command Error may occur. Upon receipt of a Class 1 command, the CompactFlash™ Storage Card sets BSY within 400 nsec. Upon receipt of a Class 2 command, the CompactFlash™ Storage Card sets BSY within 400 nsec, sets up the sector buffer for a write operation, sets DRQ within 700 µsec, and clears BSY within 400 nsec of setting DRQ. Upon receipt of a Class 3 command, the CompactFlash™ Storage Card sets BSY within 400 nsec, sets up the sector buffer for a write operation, sets DRQ within 20 msec (assuming no re-assignments), and clears BSY within 400 nsec of setting DRQ.

7.1. CF – ATA Command Set

Command	Code	FR	SC	SN	CY	DH	LBA	
Check Power Mode	E5 or 98h	–	–	–	–	Y	–	Support
Execute Drive Diagnostic	90h	–	–	–	–	Y	–	Support
Erase Sector	C0h	–	Y	Y	Y	Y	Y	Support
Format Track	50h	–	Y	–	Y	Y	Y	Support
Identify Device	Ech	–	–	–	–	Y	–	Support
Idle	E3h or 97h	–	Y	–	–	Y	–	Support

Write Multiple	C5h	–	Y	Y	Y	Y	Y	Support
Write Multiple w/o Erase	CDh	–	Y	Y	Y	Y	Y	Support
Write Sector(s)	30h or 31h	–	Y	Y	Y	Y	Y	Support
Write Sector(s) w/o Erase	38h	–	Y	Y	Y	Y	Y	Support
Write Verify	3Ch	–	Y	Y	Y	Y	Y	Support

Definitions:

FR = Features Register

SC = Sector Count Register (00H-FFH; 00H means 256 sectors)

SN = Sector Number Register

CY = Cylinder Low/High Register

DH = Head No. (0-15) of Drive/Head Register

LBA = Logic Block Address Mode Support

- = Not used for the command

Y = Used for the command

7.2. SMART Command Support

CompactFlash™ Card series supports SMART command set and define some vendor specific data to report spare/bad block number in each memory management unit. Users can get the data by “Read Data” command.

SMART Feature Register Values			
D0h	Read Data	D4h	Execute OFF-LINE Immediate
D1h	Read Attribute Threshold	D8h	Enable SMART Operations
D2h	Enable/Disable Autosave	D9h	Disable SMART Operations
D3h	Save Attribute Values	DAh	Return Status

Notes: If reserved size below the Threshold, the status can be read from Cylinder register by Return Status command (DAh).

SMART Data Structure (READ DATA (D0h))

BYTE	F / V	Decription
0-1	X	Revision code
2-361	X	Vendor specific
362	V	Off line data collection status
363	X	Self-test execution status byte
364-365	V	Total time in seconds to complete off-line data collection activity
366	X	Vendor specific
367	F	Off-line data collection capability
368-369	F	SMART capability
370	F	Error logging capability 7-1 Reserved 0 1=Device error logging supported
371	X	Vendor specific

BYTE	F / V	Decription
372	F	Short self-test routine recommended polling time (in minutes)
373	F	Extended self-test routine recommended polling time (in minutes)
374	F	Conveyance self-test routine recommended polling time (in minutes)
375-385	R	Reserved
386-395	F	Firmware Version/Date Code
396	V	Number of MU in device (0~n)
397+(n*6)	V	MU number
398+(n*6)	V	MU data block
400+(n*6)	V	MU spare block
401+(n*6)	V	Init. Bad block
402+(n*6)	V	Run time Bad block information
511	V	Data structure checksum

Notes:

F = the content of the byte is fixed and does not change.

V = the content of the byte is variable and may change depending on the state of the device or the commands executed by the device.

X = the content of the byte is vendor specific and may be fixed or variable.

R = the content of the byte is reserved and shall be zero.

N = Nth Management Unit

** 4 Byte value : [MSB] [2] [1] [LSB]*

7.3. Identify Drive Information(True IDE Mode)

Word Address	Default value	Total Bytes	Data Field Type information
0	848Ah	2	General configuration - signature for the CompactFlash Storage Card
1	XXXXh	2	Default number of cylinders
2	0000h	2	Reserved
3	00XXh	2	Default number of heads
4	0000h	2	Obsolete
5	0240h	2	Obsolete
6	XXXXh	2	Default number of sectors per track
7-8	XXXXh	4	Number of sectors per card (Word 7 = MSW, Word 8 = LSW)
9	0000h	2	Obsolete
10-19	XXXXh	20	Serial number in ASCII (Right Justified)
20	0002h	2	Obsolete
21	0002h	2	Obsolete
22	0004h	2	Number of ECC bytes passed on Read/Write Long Commands
23-26	XXXXh	8	Firmware revision in ASCII. Big Endean Byte Order in Word
27-46	XXXXh	40	Model number in ASCII (Left Justified) Big Endean Byte Order in Word
47	8001h	2	Maximum number of sectors on Read/Write Multiple command
48	0000h	2	Reserved
49	0300h	2	Capabilities
50	0000h	2	Reserved
51	0200h	2	PIO data transfer cycle timing mode
52	0000h	2	Obsolete
53	0007h	2	Field validity
54	XXXXh	2	Current numbers of cylinders
55	XXXXh	2	Current numbers of heads
56	XXXXh	2	Current sectors per track
57-58	XXXXh	4	Current capacity in sectors (LBAs)(Word57=LSW , Word58=MSW)
59	0101h	2	Multiple sector setting
60-61	XXXXh	4	Total number of sectors addressable in LBA Mode
62	0000h	2	Reserved
63	0007h	2	Multiword DMA transfer. In PCMCIA mode this value shall be oh
64	0003h	2	Advanced PIO modes supported

Word Address	Default value	Total Bytes	Data Field Type information
65	0078h	2	Minimum Multiword DMA transfer cycle time per word.
66	0078h	2	Recommended Multiword DMA transfer cycle time.
67	0078h	2	Minimum PIO transfer cycle time without flow control
68	0078h	2	Minimum PIO transfer cycle time with IORDY flow control
69-79	0000h	20	Reserved
80	0010h	2	Major version number
81	0000h	2	Minor version number
82	7028h	2	Command sets supported
83	5000h	2	Command sets supported
84	4000h	2	Command sets supported
85	0001h	2	Command sets Enable
86	0000h	2	Command sets Enable
87	0002h	2	Command sets Enable
88	001Fh	2	Ultra DMA support and selected
89	0000h	2	Time required for Security erase unit completion
90	0000h	2	Time required for Enhanced security erase unit completion
91	0000h	2	Current Advanced power management value
92	0000h	2	Master Password Revision Code
93	600Fh	2	Hardware reset result (Master)
	6F00h		Hardware reset result (Slave)
	603Fh		Hardware reset result (Master w/ slave present)
94-127	0000h	68	Reserved
128	0000h	2	Security status
129-159	0000h	64	vendor unique bytes
160	81F4h	2	Power requirement description
161	0000h	2	Reserved
162	0000h	2	Key management schemes supported
163	0092h	2	CF Advanced True IDE Timing Mode Capability and Setting
164	0000h	2	CF Advanced PCMCIA I/O and Memory Timing Mode Capability and Setting 80ns cycle in memory and I/O mode
165-175	0000h	22	Reserved
176-255	0000h	140	Reserved

7.4. ID Table Information (PCMCIA Mode)

Word Address	Default value	Total Bytes	Data Field Type Information
0	848Ah	2	General configuration - signature for the CompactFlash Storage Card
1	XXXXh	2	Default number of cylinders
2	0000h	2	Reserved
3	00XXh	2	Default number of heads
4	0000h	2	Obsolete
5	0240h	2	Obsolete
6	XXXXh	2	Default number of sectors per track
7-8	XXXXh	4	Number of sectors per card (Word 7 = MSW, Word 8 = LSW)
9	0000h	2	Obsolete
10-19	XXXXh	20	Serial number in ASCII (Right Justified)

Identify Drive Information Description

Word 0: General Configuration

This field indicates that the device is a CompactFlash™ Storage Card. Note to host implementers: If Word 0 of the Identify drive information is 848Ah then the device complies with the CFA specification, not with the ATA-4 specification.

Word 1: Default Number of Cylinders

This field contains the number of translated cylinders in the default translation mode. This value will be the same as the number of cylinders.

Word 3: Default Number of Heads

This field contains the number of translated heads in the default translation mode.

Word 6: Default Number of Sectors per Track

This field contains the number of sectors per track in the default translation mode.

Words 7-8: Number of Sectors per Card

This field contains the number of sectors per CompactFlash™ Storage Card. This double word value is also the first invalid address in LBA translation mode.

Words 10-19: Serial Number

This field contains the serial number for this CompactFlash™ Storage Card and is right justified and padded with spaces (20h).

Word 22: ECC Count

This field defines the number of ECC bytes used on each sector in the Read and Write Long commands. This value shall be set to 0004h.

Words 23-26: Firmware Revision

This field contains the revision of the firmware for this product.

Words 27-46: Model Number

This field contains the model number for this product and is left justified and padded with spaces (20h).

Word 47: Read/Write Multiple Sector Count

Bits 15-8 shall be the recommended value of 80h or the permitted value of 00h.

Bits 7-0 of this word define the maximum number of sectors per block that the CompactFlash™ Storage Card supports for Read/Write Multiple commands.

Word 49: Capabilities

Bit 13: Standby Timer If bit 13 is set to 1 then the Standby timer is supported as defined by the IDLE command. If bit 13 is set to 0 then the Standby timer operation is defined by the vendor. Bit 11: IORDY Supported If bit 11 is set to 1 then this CompactFlash™ Storage Card supports IORDY operation. If bit 11 is set to 0 then this CompactFlash™ Storage Card may support IORDY operation. Bit 10: IORDY may be disabled Bit 10 shall be set to 0, indicating that IORDY may not be disabled. Bit 9: LBA supported Bit 9 shall be set to 1, indicating that this CompactFlash™ Storage Card supports LBA mode addressing. CF devices shall support LBA addressing. Bit 8: DMA Supported If bit 8 is set to 1 then Read DMA and Write DMA commands are supported. Bit 8 shall be set to 0. Read/Write DMA commands are not currently permitted on CF cards.

Word 51: PIO Data Transfer Cycle Timing Mode

The PIO transfer timing for each CompactFlash™ Storage Card falls into modes that have unique parametric timing specifications. The value returned in Bits 15-8 shall be 00h for mode 0, 01h for mode 1, or 02h for mode 2. Values 03h through FFh are reserved.

Word 53: Translation Parameters Valid

Bit 0 shall be set to 1 indicating that words 54 to 58 are valid and reflect the current number of cylinders, heads and sectors. If bit 1 of word 53 is set to 1, the values in words 64 through 70 are valid. If this bit is cleared to 0, the values reported in words 64-70 are not valid. Any CompactFlash™ Storage Card that supports PIO mode 3 or above shall set bit 1 of word 53 to one and support the fields contained in words 64 through 70.

Words 54-56: Current Number of Cylinders, Heads, Sectors/Track

These fields contain the current number of user addressable Cylinders, Heads, and Sectors/Track in the current translation mode.

Words 57-58: Current Capacity

This field contains the product of the current cylinders times heads times sectors.

Word 59: Multiple Sector Setting

Bits 15-9 are reserved and shall be set to 0. Bit 8 shall be set to 1 indicating that the Multiple Sector Setting is valid. Bits 7-0 are the current setting for the number of sectors that shall be transferred per interrupt on Read/Write Multiple commands.

Words 60-61: Total Sectors Addressable in LBA Mode

This field contains the total number of user addressable sectors for the CompactFlash™ Storage Card in LBA mode only.

Word 64: Advanced PIO transfer modes supported

Bits 7 through 0 of word 64 of the Identify Device parameter information is defined as the advanced PIO data transfer supported field. If this field is supported, bit 1 of word 53 shall be set to one. This field is bit significant. Any number of bits may be set to one in this field by the CompactFlash™ Storage Card to indicate the advanced PIO modes it is capable of supporting. Of these bits, bits 7 through 2 are reserved for future advanced PIO modes. Bit 0, if set to one, indicates that the CompactFlash™ Storage Card supports PIO mode 3. Bit 1, if set to one, indicates that the CompactFlash™ Storage Card supports PIO mode 4.

Word 67: Minimum PIO transfer cycle time without flow control

Word 67 of the parameter information of the Identify Device command is defined as the minimum PIO transfer without flow control cycle time. This field defines, in nanoseconds, the minimum cycle time that, if used by the host, the CompactFlash™ Storage Card guarantees data integrity during the transfer without utilization of flow control. If this field is supported, Bit 1 of word 53 shall be set to one. Any CompactFlash™ Storage Card that supports PIO mode 3 or above shall support this field, and the value in word 67 shall not be less than the value reported in word 68. If bit 1 of word 53 is set to one because a CompactFlash™ Storage Card supports a field in words 64-70 other than this field and the CompactFlash™ Storage Card does not support this field, the CompactFlash™ Storage Card shall return a value of zero in this field.

Word 68: Minimum PIO transfer cycle time with IORDY

Word 68 of the parameter information of the Identify Device command is defined as the minimum PIO transfer with IORDY flow control cycle time. This field defines, in nanoseconds, the minimum cycle time that the CompactFlash™ Storage Card supports while performing data transfers while utilizing IORDY flow control. If this field is supported, Bit 1 of word 53 shall be set to one. Any CompactFlash™ Storage Card that supports PIO mode 3 or above shall support this field, and the value in word 68 shall be the fastest defined PIO mode supported by the CompactFlash™ Storage Card. If bit 1 of word 53 is set to one because a CompactFlash™ Storage Card supports a field in words 64-70 other than this field and the CompactFlash™ Storage Card does not support this field, the CompactFlash™ Storage Card shall return a value of zero in this field.

Words 82-84: Features/command sets supported

Words 82, 83, and 84 shall indicate features/command sets supported. The value 0000h or FFFFh was placed in each of these words by CompactFlash™ Storage Cards prior to ATA-3 and shall be interpreted by the host as meaning that features/command sets supported are not indicated. Bits 1 through 13 of word 83 and bits 0 through 13 of word 84 are reserved. Bit 14 of word 83 and word 84 shall be set to one and bit 15 of word 83 and word 84 shall be cleared to zero to provide indication that the features/command sets supported words are valid. The values in these words should not be depended on by host implementers. Bit 0 of word 82 shall be set to zero; the SMART feature set is not supported. If bit 1 of word 82 is set to one, the Security Mode feature set is supported. Bit 2 of word 82 shall be set to zero; the Removable Media feature set is not supported. Bit 3 of word 82 shall be set to one; the Power Management feature set is supported. Bit 4 of word 82 shall be set to zero; the Packet Command feature set is not supported. If bit 5 of word 82 is set to one, write cache is supported. If bit 6 of word 82 is set to one, look-ahead is supported. Bit 7 of word 82 shall be set to zero; release interrupt is not supported. Bit 8 of word 82 shall be set to zero; Service interrupt is not supported. Bit 9 of word 82 shall be set to zero; the Device Reset command is not supported. Bit 10 of word 82 shall be set to zero; the Host Protected Area feature set is not supported. Bit 11 of word 82 is obsolete. Bit 12 of word 82 shall be set to one; the CompactFlash™ Storage Card supports the Write Buffer command. Bit 13 of word 82 shall be set to one; the CompactFlash™ Storage Card supports the Read Buffer command. Bit 14 of word 82 shall be set to one; the CompactFlash™ Storage Card supports the NOP command. Bit 15 of word 82 is obsolete. Bit 0 of word 83 shall be set to zero; the CompactFlash™ Storage Card does not support the Download Microcode command. Bit 1 of word 83 shall be set to zero; the CompactFlash™ Storage Card does not support the Read DMA Queued and Write DMA Queued commands. Bit 2 of word 83 shall be set to one; the CompactFlash™ Storage Card supports the CFA feature set. If bit 3 of word 83 is set to one, the CompactFlash™ Storage Card supports the Advanced Power Management feature set. Bit 4 of word 83 shall be set to zero; the CompactFlash™ Storage Card does not support the Removable Media Status feature set.

Words 85-87: Features/command sets enabled

Words 85, 86, and 87 shall indicate features/command sets enabled. The value 0000h or FFFFh was placed in each of these words by CompactFlash™ Storage Cards prior to ATA-4 and shall be interpreted by the host as meaning that features/command sets enabled are not indicated. Bits 1 through 15 of word 86 are reserved. Bits 0-13 of word 87 are reserved. Bit 14 of word 87 shall be set to one and bit 15 of word 87 shall be cleared to zero to provide indication that the features/command sets enabled words are valid. The values in these words should not be depended on by host implementers. Bit 0 of word 85 shall be set to zero; the SMART feature set is not enabled. If bit 1 of word 85 is set to one, the Security Mode feature set has been enabled via the Security Set Password command. Bit 2 of word 85 shall be set to zero; the Removable Media feature set is not supported. Bit 3 of word 85 shall be set to one; the Power Management feature set is supported. Bit 4 of word 85 shall be set to zero; the Packet Command feature set is not enabled. If bit 5 of word 85 is set to one, write cache is enabled. If bit 6 of word 85 is set to one, look-ahead is enabled. Bit 7 of word 85 shall be set to zero; release interrupt is not enabled. Bit 8 of word 85 shall be set to zero; Service interrupt is not enabled. Bit 9 of word 85 shall be set to zero; the Device Reset command is not supported. Bit 10 of word 85 shall be set to zero; the Host Protected Area feature set is not supported. Bit 11 of word 85 is obsolete. Bit 12 of word 85 shall be set to one; the CompactFlash™ Storage Card supports the Write Buffer command. Bit 13 of word 85 shall be set to one; the CompactFlash™ Storage Card supports the Read Buffer command. Bit 14 of word 85 shall be set to one; the CompactFlash™ Storage Card supports the NOP command.

Bit 15 of word 85 is obsolete. Bit 0 of word 86 shall be set to zero; the CompactFlash™ Storage Card does not support the Download Microcode command. Bit 1 of word 86 shall be set to zero; the CompactFlash™ Storage Card does not support the Read DMA Queued and Write DMA Queued commands. If bit 2 of word 86 shall be set to one, the CompactFlash™ Storage Card supports the CFA feature set. If bit 3 of word 86 is set to one, the Advanced Power Management feature set has been enabled via the Set Features command. Bit 4 of word 86 shall be set to zero; the CompactFlash™ Storage Card does not support the Removable Media Status feature set.

Word 89: Time required for Security erase unit completion

Word 89 specifies the time required for the Security Erase Unit command to complete. This command shall be supported on CompactFlash™ Storage Cards that support security.

Value Time

0 Value not specified

1-254 (Value * 2) minute

255 >508 minutes

Word 90: Time required for Enhanced security erase unit completion

Word 90 specifies the time required for the Enhanced Security Erase Unit command to complete. This command shall be supported on CompactFlash™ Storage Cards that support security.

Value Time

0 Value not specified

1-254 (Value * 2) minutes

255 >508 minutes

Word 91: Advanced power management level value

Bits 7-0 of word 91 contain the current Advanced Power Management level setting.

Word 128: Security Status

Bit 8: Security Level

If set to 1, indicates that security mode is enabled and the security level is maximum.

If set to 0 and security mode is enabled, indicates that the security level is high.

Bit 5: Enhanced security erase unit feature supported

If set to 1, indicates that the Enhanced security erase unit feature set is supported.

Bit 4: Expire

If set to 1, indicates that the security count has expired and Security Unlock and Security Erase

Unit are command aborted until a power-on reset or hard reset.

Bit 3: Freeze

If set to 1, indicates that the security is Frozen.

Bit 2: Lock

If set to 1, indicates that the security is locked.

Bit 1: Enable/Disable

If set to 1, indicates that the security is enabled.

If set to 0, indicates that the security is disabled.

Bit 0: Capability If set to 1, indicates that CompactFlash™ Storage Card supports security mode feature set. If set to 0, indicates that CompactFlash™ Storage Card does not support security mode feature set.

Word 160: Power Requirement Description

This word is required for CompactFlash™ Storage Cards that support power mode 1.

Bit 15: VLD

If set to 1, indicates that this word contains a valid power requirement description.

If set to 0, indicates that this word does not contain a power requirement description.

Bit 14: RSV

This bit is reserved and must be 0.

Bit 13: -XP

If set to 1, indicates that the CompactFlash™ Storage Card does not have Power Level 1

commands.

If set to 0, indicates that the CompactFlash™ Storage Card has Power Level 1 commands

Bit 12: -XE

If set to 1, indicates that Power Level 1 commands are disabled.

If set to 0, indicates that Power Level 1 commands are enabled.

Bit 0-11: Maximum current

This field contains the CompactFlash™ Storage Card's maximum current in mA.

Word 162: Key Management Schemes Supported

Bit 0: CPRM support

If set to 1, the device supports CPRM Scheme (Content Protection for Recordable Media)

If set to 0, the device does not support CPRM.

Bits 1-15 are reserved for future additional Key Management schemes.

APPENDIX

A. Ordering Information

1. Part Numbers

Capacity	Commercial Temperature (0° to +70°)	Industrial Temperature (-40° to +85°)
16MB	FCF-16MB-X ¹ X ² XX	FCFI-16MB-X ¹ X ² XX
32MB	FCF-32MB-X ¹ X ² XX	FCFI-32MB-X ¹ X ² XX
64MB	FCF-64MB-X ¹ X ² XX	FCFI-64MB-X ¹ X ² XX
128MB	FCF-128MB-X ¹ X ² XX	FCFI-128MB-X ¹ X ² XX
256MB	FCF-256MB-X ¹ X ² XX	FCFI-256MB-X ¹ X ² XX
512MB	FCF-512MB-X ¹ X ² XX	FCFI-512MB-X ¹ X ² XX
1GB	FCF-01GB-X ¹ X ² XX	FCFI-01GB-X ¹ X ² XX
2GB	FCF-02GB-X ¹ X ² XX	FCFI-02GB-X ¹ X ² XX
4GB	FCF-04GB-X ¹ X ² XX	FCFI-04GB-X ¹ X ² XX
8GB	FCF-08GB-X ¹ X ² XX	FCFI-08GB-X ¹ X ² XX
16GB	FCF-16GB-X ¹ X ² XX	FCFI-16GB-X ¹ X ² XX

- 1) X¹: Transfer mode: 2 = (PIO 4), 3 = DMA 2 (Multi Word), 4 = UDMA 4 (Ultra DMA)
 2) X²: Disk mode: 1 = Removable Disk, 2 = Fixed Disk, 3 = Auto Detect Disk

*Available Options:

16MB to 512MB

- 2130 = Removable, PIO 4
- 2230 = Fixed, PIO 4
- 3230 = Fixed, DMA2
- 3330 = Auto Detect, DMA 2

1GB to 8GB

- 2130 = Removable, PIO 4
- 2230 = Fixed, PIO 4
- 3230 = Fixed, DMA2
- 3330 = Auto Detect, DMA 2
- 4130 = Removable, UDMA 4
- 4230 = Fixed, UDMA 4
- 4330 = Auto Detect, UDMA 4

16GB

- 4231 = Fixed, UDMA 4
- 4331 = Auto Detect, UDMA 4

***Other options available upon request**

Warranty is 3 Years

California PC FLASH is available for purchase online from www.CaliforniaPC.com as well as from several dealers in the U.S. and WorldWide.
